

Manufacturer of Quality Water Treatment Chemicals for Potable and Industrial Water Systems.

DUNS Number: **039184643**
CAGE Code: **3ZYY0**
Socioeconomic Factor: **Small Business**

Core Competencies:

We produce High Quality NSF® Certified Phosphate Blends for applications in both potable (drinking) and non-potable water systems to address problems associated with mineral precipitation, mineral scale buildup, and internal corrosion. Our proprietary formulas have been applied to various municipal and industrial systems for over 30 years with remarkable results. We use only domestically US produced ingredients to assure consumer safety and treatment consistency throughout the water distribution system.

Mineral Sequestration

Prevent Discolored Water Conditions.

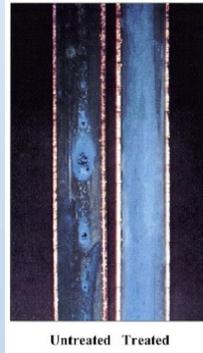

Mineral Scale Deposit

Prevention and Removal

Corrosion Inhibition

Internal Protection

Our Water Treatment will first combine with the natural minerals in the source water sequestering the mineral ions to prevent discolored water. Then our treatment will slowly dissolve existing mineral deposits to increase the carrying capacity of the system and reduce a potential source of discolored water. And finally, the treatment will form a thin protective coating on the interior surfaces to reduce or inhibit internal corrosion throughout the distribution system.

Past Performance:

● FEMA / DHS

● U.S Air Force

● Alaskan Native Tribal Health Consortium

● U.S. Dept. of Veterans Affairs

Differentiators: Unlike our competition, we produce our formulations using only ingredients manufactured in the domestic United States. This is especially important when you consider the potential problems associated with using components from China, Mexico, India, Russia, etc. particularly when they expected to be applied to consumer drinking water systems. Also, our formulations are unique blends specifically designed by SPER Chemical engineers for maintaining stability over elevated temperatures and over long periods of time.

Certification and Approvals:

Certified to
ANSI/NSF 60

National Sanitation
Foundation

U. S. Environmental
Protection Agency

U. S. Food & Drug
Administration

Government POC

Packaging:
Granular 50 lb & 300 lb.
Liquid: 5, 30 & 55 gallon

NAICS Codes:

325180 - Polyphosphate
325998 - Corrosion Inhibitor
424690 - Other Chemical and Allied Products
221310 - Water Supply and Irrigation Systems
237110 - Water and Sewer Line Construction

PSC Codes:

4610 - Water Purification Equipment
6810 - Chemicals
6850 - Miscellaneous Chemical Specialties
J046 - Maint/Repair/Rebuild Water Treatment Equipment
